## Financial Report 31.03.2023

1<sup>st</sup> quarter of 2023 has generally been an attractive period for the main segments in international seaborne transportation. The tanker segment is leading the race with overall strong performances in the various categories, crude, product and easy chemicals. There is commonly a distinct optimism for the further development in the tanker sector, mainly backed on the lasting distribution disturbances caused by the Ukrainian-Russian war and moderate new-building contracting activity and low existing order books. The dry bulk market has recouped to a certain degree after a gloomy start of the year. The Chinese reopening after Covid has been pointed at by many analytics as the main driver for a strong period ahead for dry bulk. After the 1<sup>st</sup> quarter one could possibly say that this is partly true, but more of the answers we will get during 2<sup>nd</sup> and 3<sup>rd</sup> quarter. 1<sup>st</sup> quarter in the container sector must for many appear as a pleasant surprise, in contrast to very negative predictions presented at the end of 2022, although there is, relatively seen, a massive drop in charter rates from the historic levels we saw during last year. The order books for larger types have grown substantially over the last year and is causing well founded concerns for the supply/demand balance when these units are coming into the market from next year and onwards. All in all, according to Clarksons cross-sector ClarkSea Index, the freight rate income for the owners are 46% higher than the 10-year historical average.

The macroeconomic picture remains filled with many uncertain factors; weak global GDP growth and increasing inflation is not a good combination and gives the central banks worldwide a lot of headache. The industrial production within OECD started with negative drop of 1.1% but seems to pick up towards the end of 1<sup>st</sup> quarter according to OECD own figures. In Asia, China was leading on with 3.9% growth during the month of March according to IMF.

The mixed figures from the macro scene are apparently not dampening down the interest for investing in the shipping sector. The second-hand marked has a high degree of liquidity and in total 697 vessels (Clarksons), a strong figure in historic perspective, changed hands so far this year with firm asset values in all sectors. The market for new buildings is still characterized by a wait-and- see attitude and the trend year-over-year is 25% down in number of new contracts (Clarksons). In particular, the ongoing research in to future marine fuels are keeping a large number of potential firm contracts back for the time being until further work and research has made the future picture clearer.

Maritime & Merchant Bank ASA has delivered its best quarterly result in its history. The profit for the period before tax is USD 4 906 213 (USD 2 534 816 in Q1 2022) and profit after tax is USD 3 679 592 (USD 1 901 112 Q1 2022). The net interest margin has increased from 3.4% in Q1 2022 to 5.2% in Q1 2023. The return of equity before tax is 16% in Q1 2023 (8.7% Q1 2022). The bank has no defaulted loans and have no credit losses.

#### Profit for the period (01.01-31.03)

The profit for the period before tax is USD 4 906 213 (USD 2 534 816 in Q1 2022) and profit after tax is USD 3 679 592 (USD 1 901 112 Q1 2022).

Net interest income and related income totalled USD 6 656 675 (USD 4 830 352), and other Income (including financial derivatives and fixed income instruments) was USD 214 254 (USD -169 757).

Operating expenses before impairments and losses totalled USD 2 126 551 (USD 1 958 048). The Cost/Income ratio came in at 31% (42%).

Loss allowance (Expected Loss) decreased USD 161 835 (increased USD 167 732). Credit Loss (Impairments) was USD 0 (USD 0)

Q1 numbers 2023 are revised. Agio on currency was incorrectly allocated as interest income in previous version. This does not affect the total income, operating result or profit for the period

#### Net interest income and related income

Net interest income and related income totalled USD 6 656 675 in Q1 (USD 4 830 352 in Q1 2022).

### Net Interest Income and Customer Lending

Net interest margin increased from to 3.4% in Q1-2022 to 4.6% in Q1-2023. Stable deposit rates and higher market rates resulted in lower funding cost and improved Net Interest Margin in addition to improved average lending volumes throughout the quarter.

#### Net Interest Margin

Money market rates (daily average) in USD and NOK are on an upward trend.

USD and NOK Short Term Interest Rates

(Source: Infront, Maritime & Merchant Bank ASA)

#### Net other Income

Net other income amounted to USD 214 254 in Q1 2023 (USD -169 757in Q1-2022 ).

Value adjustments on derivatives and hedging instrument in Q1 was USD 89 284 due to an apreciation of the USD against NOK (USD 84 034 in Q1-2022).

Value adjustments on interest-bearing securities was USD -17 333 for Q1 (USD -367 665 in 2022)

The principle of assessing financial instruments measured at fair value may lead to significant variation of the Bank's result between quarters.

Net commissions amounted to USD 142 293 in Q1 (USD 113 874 in Q1-2022).

#### Total operating expenses before impairments and losses

Operating expenses before impairments and losses totalled USD 2 126 551 in Q1 (USD 1 958 048 in Q1-2022). Salaries and personnel expenses, including social costs, amounted to USD 1 474 933 (USD 1 357 271 in Q1-2022) and account for the largest proportion of the overall operating expenses.

Total depreciation and impairment of fixed and intangible assets amounted to USD 110 681 (USD 182 544 in Q1-2022). The Cost/Income ratio came in at 31% in Q1 (42% in Q1-2022).

#### **Operating result**

Operating result in Q1 amounted to USD 4 744 379 (USD 2 702 547 in Q1-2022).

#### Loan and Loan Loss provisions

Maritime & Merchant Bank ASA has lent USD 349 251 735 (USD 317 571 618 in Q1 2022) to customers.

The Bank has made USD 1 752 184 (USD 1 210 986) in loss allowance (IFRS 9). Change in loss allowance this quarter amounts to USD -161 835 (USD 167 732).

The credit quality of the majority of the loans (measured by PD – Probability of Default) to all segments continues to be strong into the first quarter of 2023. The decrease in Loss Allowances at 31.03.2023

compared to 31.12.22 is due to our overall portfolio being somewhat smaller compared to year end due to sale of vessels being financed. We forecast in the IFRS 9 calculations that we might see corrections predominantly within tank segment going forward, but that there also is some downside risk in the bulk and container segments.

All of the commitments are in step 1 (95.2 % in Q1-2022).

Loss allowance	31.03.2022	31.03.2022	31.12.2022	31.12.2021
Step1	1 205 351	649 263	1 345 649	618 860
Step2	546 833	963 765	568 370*	826 436
Step3	0	0	0	0
Sum	1 752 184	1 613 028	1 914 019	1 445 296
Allowance/Loan Ratio	0,50 %	0,51 %	0.51%	0,46 %
Impairments	0	0	0	0
Non performing Loans	0	0	0	0
** ** ** **				

The bank has no defaulted or non-performing loans by the end of the Q1.

\*Loss allowance in step 2 is a result of anticipated migration in the negative macro scenario

## Loss Allowance/Lending (in %)

#### Profit before tax

Profit before tax amounted to USD 4 906 213 in Q1 (USD 2 534 816 in Q1-2022). Return on equity before tax was 16% (8.7% in Q1-2022).

Profit Before Tax (USDm)

#### Deferred Taxes and payable tax

The Bank operates with USD as functional currency.

In the tax accounting, both P&L and the major part of assets and liabilities are being converted from USD to NOK, including any effect currency fluctuations would have on the equity of the Bank.

The volatility of the NOK against the USD has given the Bank an unintended volatility in the tax expense, due to currency gains/losses related to our equity.

The Bank has started a process for a rule adjustment for the basis of tax calculation that prevents unintended effects for the future.

Common 25% corporate tax rate is used in the first quarter of 2023.

If there is no decision (or a negative one) from the Ministry of Finance within the fiscal year, we will incorporate a full agio effect in Q4 2023. The agio effect (extra taxable income/cost) will be a result of the USDNOK exchange rate at year end.

Exchange rate (USDNOK) 31.03.2023 was 10,4729 compared to USD 9,85535 31.12.2022.

The agio effect (unintended taxable income/cost) for Q1 2023 is positive NOK 76 955 763. This "phantom" income will result in an additional calculated tax of NOK 19 238 941 (USD 1 837 021), bringing the calculated tax rate up to 62,4%.

See Note 5, Tax Calculation.

#### **Deposit and Liquidity**

Customer deposits amounted to USD 414 913 238 in Q1-2023 (USD 468 223 785 in Q1-2022).

#### **Customer Deposits vs Customer Lending**

Deposits and Lending-LHS (million USD)

The deposit to loan ratio was 119% at the end of Q1 2023 (147% in Q1 -2022).

The liquidity situation has been good throughout the quarter. Surplus liquidity of about USD 228 million was mainly invested in interest-bearing securities, deposits in major banks and in Norges Bank. The securities investments are in bonds with good liquidity and very low risk.

The Bank's short-term liquidity risk measured by LCR (Liquidity Coverage Ratio) was 703% (above a minimum requirement of 100%), and the long-term liquidity risk measured by NSFR (net Stable Funding Ratio) was 137% (above a minimum requirement of 100%).

#### Total Assets and Lending

Total assets ended at USD 577 592 048 in Q1 2023 (USD 599 050 421 in Q1 2022).

Lending to customer increased from USD 317 571 618 in Q1 2022 to USD 349 251 735 in Q1 2023.

Customer lending in 2023

#### <u>Solvency</u>

Core equity ratio (CET1) was 35.0% 31.03.2023 (30.9% 31.03.2022). The Bank has not issued any subordinated or perpetual bonds. The Bank will pay NOK 5,28 per share in dividend for 2022 on the 5<sup>th</sup> of May (USD 4 000 000).

## **Risk factors**

#### Credit risk

The average weighted quality of the portfolio is moderate risk, and the portfolio has a strong concentration around the mid-point compared to the more diversified distribution in 2020 and early 2021. The average risk for bulkers has slightly decreased in the quarter due to the volatile bulk market and subsequently vessel values.

All commitments are secured with 1<sup>st</sup> priority mortgage on vessels, and the large majority of those were secured within 50-55% of appraised values when granted. In combination with an estimated moderate Default Probability, the moderate loan-to-value ratios provide for a sound credit portfolio with a limited potential for future losses, in particular since the vessels' values for most clients have a good margin in relation to the outstanding exposures.

In addition to estimating the Default Probability, we also estimate the Loss Given Default on each exposure. Based on the low leverage of financing in combination with financing non-specialized tonnage with strict covenants, the Loss Given Default for the loan portfolio is satisfactory.

The Bank's estimated risk cost, Expected Loss, is calculated as Probability of Default multiplied with Loss Given Default. It is included in all internal return on capital estimations in connection with granting new loans.

The portfolio is distributed in risk classes according to collateral and internal risk classification.

The loan portfolio is diversified and is distributed on bulk carriers (48%), tankers (38%), container vessels (10%), LPG (gas) (4%) and specialized (0%).

### The loan portfolio

The Bank's internal credit strategy has limits for maximum exposure to the various shipping segments, and Acceptable Risk Criteria form guidelines for the lending strategy.

#### <u>ESG risk</u>

The International Maritime Organization's (IMO) regulations with regards to the Carbon Intensity Indicator (CII) was introduced on 1 January 2023. This measures how much CO2 each ship emits annually. The vessels will be measured throughout 2023 for a 12-month emission period based on a detailed and extensive formula. During the beginning of 2024 each vessel will be assigned a rating from A to E based on the prior year's data.

Vessels that receive an A to C rating are in the clear and compliant, however, vessels receiving a D rating for three consecutive years, or an E rating will have to put forward a corrective action plan on how to receive a C rating or better during the coming 12 months. Example of a corrective action plan might be installation of Engine Power Limitation (EPL), permanent slow steaming, or for the vessel to change fuel. The trajectory to obtain the rating classes A to E is lowered each year, thereby becoming increasingly rigorous towards 2030.

The Bank and the shipping industry do not know yet how these CII ratings will impact second hand values and time charter rates, if at all, and we will monitor this closely going forward to be able to pick up on trends in the market that might influence our portfolio and when considering new facilities.

#### <u>Liquidity risk</u>

Maritime & Merchant Bank ASA has adopted guidelines for management of the Bank's liquidity position to ensure that the Bank maintains a solid liquidity. The Bank has a low liquidity risk profile. Main funding sources are equity and NOK deposits. The Bank has liquidity portfolio/buffers well above minimum requirement. Liquidity stress tests show satisfactory liquidity.

	31.03.2022	31.03.2022	31.12.2022	31.12.2021	31.12.2020
LCR	703%	851%	450%	564%	353%
Deposit Ratio (1)	72%	78%	74%	77%	78%

(1) % of total assets

#### Interest rate risk

Maritime & Merchant Bank ASA has defined guidelines that set limits for the maximum interest rate risk. Any exposure exceeding the interest rate risk limits shall be mitigated by using hedging instruments.

#### <u>Market risk</u>

Maritime & Merchant Bank ASA has developed guidelines and limits for counterparty exposure, maturity per counterpart, average duration of portfolio and foreign exchange risk.

#### **Operational risk**

Maritime & Merchant Bank ASA has established operational risk policy and guidelines. Contingency plans have been established, and insurance (professional responsibility, crime and Board of Directors responsibility) is purchased in order to reduce risk.

#### <u>Ratios</u>

Ratios	Q1 2023	Q1 2022	2022
Cost/Income Ratio	31%	42%	36.3%
Return on Equity before tax	16.0%	8.7%	11.6%

Ratio formulas, se Appendix 1

#### <u>Outlook</u>

Although the world economy, at best are delivering mixed results, we observe a firm interest for investing in the maritime sector due to interesting market conditions, we therefore have an optimistic view on our opportunities going forward. We feel that we are well positioned for taking part in our clients expansion plans as the financial partner.

Oslo May 8<sup>th</sup>, 2023

Board of Directors, Maritime & Merchant Bank ASA

## Notes 31.03.2023.

### Note 1, Reporting entity

Maritime & Merchant Bank ASA is a company domiciled in Norway. The Bank's registered office is at Haakon VIIs gate 1, 0161 Oslo. The Bank is primarily involved in corporate banking.

### Note 2, General accounting principles

The interim report for the first quarter 2023 is prepared according to IAS 34 Interim Financial Reporting and IFRS as adopted by EU. The interim report for the first quarter 2023 is prepared using the same accounting principles and calculation methods as described in the Annual Report 2022.

### Note 3, Functional and presentation currency

These consolidated financial statements are presented in USD, which is the Bank's functional currency. The Bank's taxation currency is NOK.

### **RISK**

Note 4, Risk

#### **Risk Management and Capital Adequacy**

The Capital Adequacy figures for Maritime & Merchant Bank ASA are based on the calculation by means of the standardised approach.

#### Credit risk

The Bank has chosen the basic approach for calculation credit risk (Risk-Weighted Assets).

#### **Operational risk**

The Bank has chosen to apply the basic approach under Pilar 1 for calculating operational risk. This applies a capital requirement of 15 per cent of the annual income reported in the last three years.

#### Market risk

The market risk of the Bank is modest and is calculated using the standardised approach in Pilar 1.

#### <u>Capital Adequacy</u>

#### Credit Risk

Credit risk is the major risk to the Bank. Maritime & Merchant Bank ASA may face a loss if the borrower is not able to pay interest or principal as agreed upon, provided the pledged collateral is not sufficient to cover the Bank's exposure.

The Bank monitors market developments in segments where it has exposure and takes a proactive approach towards the risks taken.

The Bank's internal credit strategy has limits for maximum exposure to the various shipping segments, and Acceptable Risk Criteria form guidelines for the lending strategy.

The Bank uses an internally developed scorecard model for assessing the credit risk in the loan portfolio. The scorecard model predicts Probability of Default (PD), Loss Given Default (LGD) and risk class (from 1 to 10). Default is failure to satisfy the terms of a loan obligation or failure to pay back a loan.

Significant judgements are required when assessing models and assumptions, and resulting estimates are thus uncertain in nature. The model is based on experience and criteria well known in scoring models. The model is validated on a regular basis.

Forward looking factors, like expected freight earnings and ship values, are based on one year forward estimates. Time charter rates for each specific segment and interest rates that are used in the model are those prevailing at the time of scoring.

Input in the scoring model for establishing the PD for one specific exposure can either be the actual earnings based on freight contracts entered into, or shipbrokers earnings estimates for the next 12 months, normally expressed in the time charter rates for the period going 12 months forward.

When a loan is granted, the PD is estimated for the full tenor of the loan, and projected future cash flow is based on long term time charter rates for similar tenor (if available) in combination with consideration of low rate scenarios.

Risk classification is done once per year as a minimum in connection with annual renewal of exposures, or more frequently if there are shifts in input factors which are not regarded as temporary.

#### Risk classes and credit score:

Very low risk	Credit score: 1-2	PD:	0.00 - 0.25%
Low risk	Credit score: 3-4	PD:	0.25 – 1.00%
Medium risk	Credit score: 5-7	PD:	1.00 - 3.00%
High risk	Credit score: 8-9	PD:	3.00 - 8.00%
Loss exposed	Credit score: 10-11	PD:	> 8.00%

#### Factors in scorecard PD - model:

#### Quantitative factors:

- Loan to value (LTV) Value Adjusted Equity
- Interest coverage Cash flow to support interest payment
- Instalment coverage Cash flow to support instalments
- Current Ratio
- Free Cash

#### **Qualitative factors**

- Corporate structure
- Ownership
- Technical management
- Commercial management

#### Factors in LGD model:

- Age of vessel
- Liquidity of vessel type (specialised tonnage)
- Yard/Country
- Net loan exposure above scrap value
- Enforcement cost
- Jurisdiction
- Corporate complexity
- Covenant Structure
- ESG

#### Expected Loss (EL)

EL = PD \* LGD \* EAD EAD = Exposure at Default (Notional + Accrued Interest - Cash Reserves)

#### Loss allowance

The EL is performed on an individual basis. After the transition to IFRS 9, provisions have been presented as expected loss over 12 months (Step 1) and expected loss over the life of the instrument (Step 2).

Non-performing commitments (Step 3) are commitments where the customer has not paid due instalments on loans within 90 days of maturity.

If credit risk has increased significantly after initial recognition but there is no objective proof of loss, an allowance of expected loss over the entire lifetime ("Step 2") has to be made. The individual loss provisions under IAS 39 did not change materially upon the transition to IFRS 9 ("Step 3").

In assessing what constitutes a significant increase in credit risk, the Bank, in addition to the standard's presumption of financial assets that have cash flows that have been due for more than 30 days are subject to significantly increased credit risk, assumed qualitative and quantitative indicators. The most important quantitative indicator the Bank assess is whether it has been a significant increase in credit risk determined by comparing the original likelihood of default and Loss Given Default ("PD x LGD") with the Probability of Default and Loss Given Default ("PD x LGD") at the reporting date. However, when assessing significant increase in credit risk for IFRS 9 purposes, Loss Given Default is not included in the assessment. Based on this the Bank has defined that a doubling in the Probability of Default or an absolute change of 1% constitutes a significant increase in credit risk.

Reclassification of commitments from Step 2 to Step 1, is based on an individual assessment. However, there must be some objective evidence that the commitment has recovered.

The Bank follows qualitative and quantitative indicators on a regular basis and in any situation where there is a suspicion that there have been conditions of negative importance for the commitment/customer.

#### Macro scenarios

Expected Loss from the Bank's risk score model will be adjusted with a macro scenario factor (MF). The Bank estimates three macro-economic scenarios consisting of factors that will or can have an impact on shipping markets and value appraisal of vessels financed in our portfolio in the respective markets. Each scenario gets assigned a probability and a factor. The factor represent change in Expected Loss or Loss Allowance. The forecast, probability assignment and factor estimation are based on own judgment and experience.

The following factors are included in the macro evaluation process:

- Demand for seaborn shipping (World growth (GDP))
- Supply: Orderbook (shipbuilding), scrapping and idle capacity (utilization)
- Cyclicality (we assume shipping is cyclical and mean reverting)
- Geopolitical and other factors

The probability weighted macro factor (MF) will be multiplied with the Expected Loss and give Loss Allowance (or Macro Scenario adjusted Expected Loss). The factor (MF) is calculated to be 1,8661.

Exposure in the scenario model is the same as at 31.03.2023.

#### **Loss Allowance and Impairments**

Loss allowance	31.03.2023	31.03.2022	31.12.2022	31.12.2021
Step1	1 205 351	649 263	1 345 649	618 860
Step2	546 833	963 765	568 370	826 436
Step3	0	0	0	0
Sum	1 752 184	1 613 028	1 914 019	1 445 296
Allowance/Loan Ratio	0,50 %	0,51 %	0,51 %	0,46 %
Impairments	0	0	0	

\*Loss allowance in step 2 is a result of anticipated migration in the negative macro scenario

#### Loans where no loss provision has been recognized due to collateral:

31.03.2023:0

31.03.2022: 0

#### Remaining exposure from credit impaired loans and loss exposed loans:

31.03.2023	Gross Loans	First-Priority pledge in vessel	Cash Pledge	Other Collateral
Remaining exposure from credit impaired loans	0	0	0	0
Loss exposed loans	0	0	0	0

31.03.2022	Gross Loans	First-Priority pledge in vessel	Cash Pledge	Other Collateral
Remaining exposure from credit impaired loans	0	0	0	0
Loss exposed loans	0	0	0	0

#### Loss allowance sensitivity

The macro scenarios impact on Probabilities of Default (PDs) result in the following sensitivity in Expected Loss Allowance calculation.

	Expected
Scenario (USD 1000)	Loss allowance
Vessel value up 30%	919
Unchanged	965
Vessel value down 30%	2 263

#### Interest Rate Risk

Maritime & Merchant Bank ASA has defined guidelines that set limits for the maximum interest rate risk. All exposure on the balance sheet and outside the balance sheet will be assessed, and any exposure exceeding the interest rate risk limits shall be mitigated by using hedging instruments. Routines have been established for on-going monitoring and reporting of the interest rate risk to the Board of Directors.

#### **Reference rates**

The Bank has assets, liabilities and derivatives linked to current money markets reference rates (LIBOR, NIBOR and EURIBOR). USD Libor will be replaced with a new reference rate in June 2023 (SOFR). NIBOR and EURIBOR reference rates might be replaced with other reference rates going forward. Changes in reference rates can have an impact on interest income, interest expenses, fair value of derivatives and financial assets/liabilities.

#### Currency Risk

All exposure on the balance sheet, outside the balance sheet and estimated income and expense items will be identified. Market exposure will be limited and within limits and authorisations granted by the Board. Routines have been established for on-going monitoring and reporting of the currency risk to the Board of Directors.

Funding in NOK is swapped to USD using cross currency basis swaps, with duration around 3 years. Using cross currency swaps match funding in NOK with lending in USD. Assets and liabilities are currency matched. The Bank has income in USD and most of the operating cost in NOK. Current strategy is to hedge between 0 and 12 months forward.

Calculated tax will be affected by changes in USDNOK exchange rate (see note 5)

#### Liquidity Risk

Maritime & Merchant Bank ASA aims to maintain a low liquidity risk, which means high liquidity buffers and good deposit coverage.

The Bank's liquidity level is assessed by calculating the Liquidity Coverage Ratio (LCR) and the Net Stable Funding Ratio (NSFR). These ratios describe the short liquidity level and the level of stable funding.

The Bank calculates liquidity surplus, which appears as available funding less future liabilities within the defined time interval and required liquidity buffers.

Maritime & Merchant Bank ASA has adopted guidelines for management of the Bank's liquidity position to ensure that the Bank maintains a solid liquidity.

#### **Operational Risk**

Operational risk is the risk of direct or indirect loss resulting from inadequate or failed processes or systems, from human error, fraud, or external events including legal risk, compliance risk and reputational risk. This type of risk also encompasses administrative risk, i.e. that the day-to-day operations of the Bank do not function properly.

The Bank Measures operational risk through incident reporting on main operational areas. The management team handle incidents in the management meetings. This incident reporting is summarized and communicated to the Risk Committee.

The Bank reduces operational risk through prudent management and supervision by establishing efficient control procedures, a well-established set of routines, a compliance function, as well as insurance cover against attempts at defrauding the Bank.

## **INCOME AND COST**

## Note 5, Taxation of profit

#### 1) Present tax calculation (Ordinary 25% tax on profit/loss)

	USD	NOK
Profit Before Tax	4 906 213	51 382 283
Tax related agio on equity	-	-
Basis for Tax Calculation	4 906 213	51 382 283
Calculated Tax (25%)	1 226 621	12 845 571

#### 2) Full currency agio on Equity (Previous method)

	USD	NOK
Profit Before Tax	4 906 213	51 382 283
Tax related agio on equity	7 348 085	76 955 763
Basis for Tax Calculation	12 254 299	128 338 046
Calculated Tax (25%)	3 063 575	32 084 512

#### The calculated tax for the period is 62% of the ordinary result before tax.

The main reason is that even though the Bank's functional currency is USD, it is required to translate both P&L and the majority of assets and liabilities to NOK for tax purposes. Changes in net assets (equity) resulting from exchange rate will be subject to tax.

### **ASSETS**

#### Note 6, Financial instruments at fair value.

The Bank measures fair values using the following fair value hierarchy, which reflects the significance of the inputs used in making the measurements.

Level 1: Inputs that are quoted market prices (unadjusted) in active markets for identical instruments.

**Level 2**: Inputs other than quoted prices included within Level 1 that are observable either directly (i.e. as prices) or indirectly (i.e. derived from prices). This category includes instruments valued using quoted market prices in active markets for similar instruments; quoted prices for identical or similar instruments in markets that are considered less than active; or other valuation techniques in which all significant inputs are directly or indirectly observable from market data.

**Level 3:** Inputs that are unobservable. This category includes all instruments for which the valuation technique includes inputs that are not observable, and the unobservable inputs have a significant effect on the instrument's valuation. This category includes instruments that are valued based on quoted prices for similar instruments for which significant unobservable adjustments or assumptions are required to reflect differences between the instruments.

	Others		864 343	10.5794 %
		Total	8 170 048	100 %

The general meeting has decided to carry out a share split with a ratio of 1 to 10. This share split will be executed in the second quarter of 2023.

## Appendices

## **Appendix 1, Alternative Performance Measures**

Formulas for calculation of Alternative Performance Measures

<u>Ratio formulas</u> Cost/Income Ratio = Total operating expences Total income
Return on equity before tax = $\frac{\text{Net profit before tax}}{(Equity \text{ start of the year+New equity*Yearfraction})}$
$Year fraction = \frac{12 - Months \ before \ equity \ issue}{12}$
Net Income Margin =
Net Income Margin = $\frac{Total income}{(Interest-bearing assets start of year+Interest-bearing assets end of year)*0,5}$
Net interest income (Interest-bearing assets start of year+Interest-bearing assets end of year)*0,5
(Interest-bearing assets start of year+Interest-bearing assets end of year)*0,5
$Deposit to loan ratio = \frac{Total deposits}{Loans to customers}$
$NPL \ ratio = \frac{Non \ performing \ exposure \ (loans \ to \ customers)}{Loans \ to \ customers} \qquad (non-performing \ loan \ ratio)$
$Deposit  ratio = \frac{Total  deposits}{Total  Assets}$
$Loss allowance/Loan Ratio = \frac{Total \ Loss \ Alloance}{Loans \ to \ customers} $ (on performing loans)
LCR = Liquid assets relative to net liquidity outflow in a 30-day stress scenario.
